The truth is coming out about Pfizer's data on their COVID-19 vaccine.

In the latest data dump, which is conveniently being ignored by the media, it has been revealed that 1,223 people died within 28 days of receiving their first Pfizer vaccine.

Again, this is all flying way under the radar.

Luckily, patriots everywhere are sharing links to the data on social media.

Said data also revealed a plethora of side effects that have been hidden from the public, and the revelation that Pfizer's claim that the injection was more than 90% effective to be a lie.

*SHOCKER: Following the release of the Pfizer documents, it's now confirmed that 1,223 people died within the first 28 days after being inoculated with the BioNTech Pfizer vaccine during trials — and it was still approved for use. [link removed]*

The Counter Signal continued:

*Far from being 'safe and effective,' Pfizer's documents prove otherwise: the BioNTech Pfizer vaccine is perhaps the most ineffectual, dangerous 'vaccine' ever brought to market.*

*Besides slaughtering over 1,000 people in under a month, trials also produced hundreds of potentially fatal side effects, created fertility issues, and were only 12-15 per cent effective at preventing infection overall and subsequently dropped to less than 1 per cent — despite health officials claiming it would be over 90 per cent effective. They were lying.*

*The fatality rate after the Pfizer vaccine is much much higher than the one from "Covid" also we see almost half of the people not recovered after the vaccine. This is a crime from Pfizer. Follow us to bring them to justice. This is data speaking#pfizerdocuments pic.twitter.com/IN1jZIWbK2*
