eCR Now: COVID-19 Electronic Case Reporting for Healthcare Providers

Improve outbreak response with real time data flow

Electronic Case Reporting (eCR)

is the automated generation and transmission of case reports from the electronic health record

(EHR) to public health agencies for review and action. eCR makes disease reporting from healthcare to public health faster and easier. It

moves data securely and seamlessly —from the EHR at the point of care, to data systems at state, territorial, and local agencies.

eCR also allows public health to provide information back to healthcare professionals. This timely data sharing provides a real time picture of

COVID-19 to support outbreak management.

eCR reduces burden on healthcare professionals, staff, and facilities

without disrupting the clinical workflow.

•

Will fulfill your clinicians' reporting requirements

•

Automatically sends required information to all appropriate public

health agencies

•

Eliminates the need for manual data entry, faxing, or responding to calls from public

health agencies

•

Offers credit through the Promoting Interoperability Program for implementing eCR

- Is compliant with HIPAA and state reporting laws

- Improves COVID-19 reporting immediately and allows expansion to all reportable conditions

eCR implementation is easy.

- Onboard in as few as three 3 days with most EHR systems

- Use the Fast Healthcare Interoperability Resources (FHIR) app if your EHR is not eCR-enabled

- Participate through eHealth exchange or Carequality without additional legal requirements

- Enhance learning and shared experiences with a growing network of implementers nationwide

Join a nationwide network now using eCR

"Our implementation of eCR improved the quality and timeliness of public health reporting for COVID-19 across the 19 states we serve. This

national gateway was a cost-effective solution that helped close critical data gaps in wide-scale reporting that saved front line providers valuable time and money."
